# The Power of Good Bacteria

**Unveiling the Mouth's Microbiome**

In May 2022, a groundbreaking scientific study published in the prestigious Springer Nature publication shed light on an intriguing discovery. The research revealed a strong correlation between individuals with healthy teeth and a thriving population of beneficial bacteria in their mouths. Surprisingly, this phenomenon occurred independently of traditional dental products like toothpaste and mouthwash.

Contrary to popular belief, it was revealed that many common dental products contain toxic ingredients that can harm the delicate balance of the oral microbiome. This finding helps explain the paradox of teeth enduring for centuries in fossils while facing deterioration when exposed to everyday substances like chocolate.

Amidst this exciting revelation, ProDentim emerges as a game-changer. Inside every ProDentim product, you will discover a remarkable blend of 3.5 billion probiotics, combined with three unique ingredients clinically proven to support the health of your teeth and gums.

## Chapter 2

# Unveiling the Unique Ingredients:

**Nature's Secrets for Oral Health**

ProDentim harnesses the power of a proprietary blend consisting of four potent plants and minerals. Each ingredient plays a crucial role in promoting optimal oral health:

**Inulin:** This natural fibre supports the growth and balance of beneficial bacteria in the mouth, aiding in the restoration of a healthy oral microbiome.

**Malic Acid:** Found abundantly in strawberries, malic acid helps maintain tooth whiteness by gently removing stains and promoting a brighter smile.

**Tricalcium Phosphate:** This mineral compound supports overall tooth health by strengthening the enamel, reducing the risk of decay and damage.

**Peppermint:** Known for its refreshing flavor, peppermint also acts as a natural anti-inflammatory, soothing gum inflammation and promoting a healthy mouth environment.

## Chapter 4

# The Beneficial Strains

## Unleashing the Power of Probiotics

ProDentim incorporates a blend of powerful probiotic strains, each offering unique benefits for oral and overall health:

**Lactobacillus Paracasei:** This strain supports the health of your gums while also helping to maintain open and clear sinuses, promoting respiratory well-being.

**B.lactis BL-04®:** Known for its ability to balance the oral microbiome, this strain supports a healthy mouth environment, respiratory health, and overall immune system function.

**Lactobacillus Reuteri:** With its anti-inflammatory properties, Lactobacillus Reuteri assists in reducing inflammation and promotes a healthy oral environment, contributing to overall oral wellness confidence.

**Malic acid:** Malic acid is a naturally occurring compound found in various fruits, including strawberries. It is known for its tart taste and is commonly used as a flavouring agent. In terms of dental health, malic acid is believed to help maintain tooth whiteness by acting as a natural teeth cleanser. It can remove surface stains and promote a brighter smile.

**Peppermint:** Peppermint is an aromatic herb known for its distinct flavor and scent. It contains compounds such as menthol, which give it a cooling sensation. Peppermint is considered a natural anti-inflammatory agent, meaning it can help reduce inflammation in the body. In terms of dental health, peppermint can have a soothing effect on gums and may help alleviate discomfort caused by inflammation or gum-related issues.

**Inulin:** Inulin is a type of dietary fibre that is found in many plants, such as chicory root, onions, and garlic. It is known to support the growth of beneficial bacteria in the gut, acting as a prebiotic. By promoting the growth of good bacteria, inulin can help improve digestion and overall gut health.

**Tricalcium Phosphate:** Tricalcium phosphate is a calcium salt that contains three calcium ions bound to one phosphate ion. It is commonly used as a nutritional supplement to provide a source of calcium, which is important for maintaining healthy teeth and bones. In tooth health, tricalcium phosphate supports the mineralisation of tooth enamel, helping to strengthen and protect the teeth.

These carefully selected probiotic strains work synergistically within ProDentim to address various aspects of oral health, from gum support and respiratory health to inflammation reduction and a balanced mouth environment.

By introducing ProDentim into your daily routine, you are not only taking a proactive step towards revitalising your oral health but also embracing a holistic approach to overall well-being. # FAQ'S

# 1

## **How and why does ProDentim work?**

The concept behind this solution is surprisingly simple...

Traditionally, we've been led to believe that "bad" bacteria are solely responsible for dental diseases. However, upon closer examination, scientists have come to understand that oral health imbalance is often caused by a deficiency of beneficial bacteria.

Unfortunately, many common dental products contain toxic ingredients that can harm the population of beneficial bacteria. This explains why teeth can remain intact for thousands of years outside of the mouth, yet suffer deterioration when exposed to everyday items like plain chocolate.

To promote the health of your teeth and gums, it's crucial to restore your mouth's population of beneficial bacteria and create an environment where these strains can flourish.

Enter ProDentim, a meticulously formulated blend created by medical experts. This innovative product combines five scientifically proven and potent strains of beneficial bacteria, delivering a total of 3.5 Billion active cultures within a revolutionary dissolvable candy.

But that's not all!
